New ATS Intelligence 2.0 Brings Automated Data Collection and Reporting of OEE

ATS is happy to announce the release of the latest version of its manufacturing intelligence software – ATS Intelligence 2.0, which comes with the following new features:

Automated Data Collection

It is now possible for downtimes and production run data to be collected directly from the production line. Data can be collected via an OPC server or via XML files. As you'd expect with any ATS software product you have all the flexibility you need to specify when and how the data is collected. This information can be pushed directly to automated reports creating a direct link from the plant floor to the board room.

Variable Data Collection

In addition to collecting essential OEE data you can now also record and analyze process variables directly from the production line. A built-in report allows you to view the variance over time as well as the minimum, maximum and average. This extra data can help you achieve your Six Sigma goals and give you a better understanding of the issues that may be affecting your OEE.

New Database Installation Module

Databases can now be created either locally or on a remote server using the database installation module. This removes the requirement to carry out a full product installation in order to create a database.

Configuration Improvements

Even though the functionality has been greatly increased in ATS Intelligence 2.0 the complexity of the configuration stage hasn't. The administrator can progress through the setup with ease. Many of the existing configuration steps have been improved upon to give a consistent look and feel to the process.

Improved Learning Experience

In ATS Intelligence 2.0 you'll be aided by enhanced, user-centered documentation and newly introduced how-to videos that'll guide you through every step of the configuration and data collection process. Combine this with training personalized to your company and you'll be up and running in no time.

About ATS Intelligence

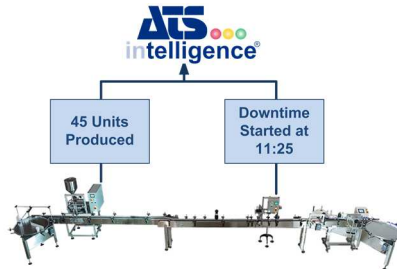

ATS Intelligence is a simple, robust and standardized OEE solution which combines extensive knowledge of manufacturers' needs, proven best practices and technological trends. Data can either be collected automatically from production line(s) via OPC and XML files or it can be entered manually on a networked or standalone device. ATS Intelligence delivers essential OEE data via quick and clear reports, whether you need an overview of a single piece of equipment or for the

whole plant. Live OEE data can be explored anywhere in the world using your internet browser. More information can be found at: www.ats-intelligence.com
